Part 1 — Pattern Discovery

Scope: Python/Flask root application; PHP subtree excluded.

Confirmed baseline patterns

Pattern	Instance	Evidence
MVC	Event Creation MVC Flow	create_event coordinates EventForm, Event and view; baseline routes
Decorator	Authenticated Event Route Registration	@app.route and @login_required wrap logout; routes.py 95-100
Active Record-like ORM	Event and Ticket Persistence Model	Event/Ticket are SQLAlchemy models; routes directly query/commit
Form Object	Event Creation Validation	EventForm encapsulates fields/date validation; routes.py 118-149

Baseline totals: 4 pattern types, 4 independent instances, 3 concrete participant classes (EventForm, Event, Ticket), and 12 deduplicated participant symbols.

Rejected candidates: Singleton, Strategy, Observer and Facade. They lacked sufficient concrete baseline collaboration evidence.

Verification: source locations and behavior were checked; no pattern was counted solely from a class name, annotation, or LLM assertion.
